LONG VISION Watch Instruction Manual

I. Introduction

Thank you for choosing a LONG VISION watch! At LONG VISION, we are committed to fashion and dedicated to quality. Guided by our brand philosophy—“Elevating Prestige to New Heights”—we seamlessly blend exquisite craftsmanship with cutting-edge design. Each LONG VISION timepiece is equipped with a Swiss Selliea movement, delivering exceptional precision in timekeeping. To ensure the highest product quality, every watch undergoes over 80 rigorous tests before it is released to the market, providing you with a reliable and stylish timekeeping companion.

II. Product Specifications

Category	Details
Movement	Swiss-made SW200 automatic movement, frequency 28,800 A/h (4Hz), approx. 38-hour power reserve
Water resistance	300 meters (suitable for swimming, deep diving, and other underwater activities; however, do not operate buttons or the crown underwater)
Case material	316 stainless steel/ceramic (actual material subject to the specific product)
Strap material	316 stainless steel strap/genuine leather strap/rubber strap (varies by model)
Crystal material	Synthetic sapphire crystal with Mohs hardness of 9, anti-reflective coating applied
Dial size	41 mm (actual size subject to product specification)

III. Operating Instructions

1. Time and date adjustment

 Important safety period: Do not adjust the date between 8:00 PM and 4:00 AM (It is recommended to first set the time to 6:00 to avoid damage when adjusting the date).

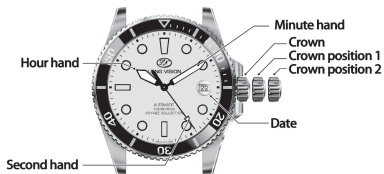

. Setting the time:

Turn the crown counterclockwise until it pops out. Pull the crown out to position 2 (fully extended). Rotate the crown counterclockwise to set the hands to the correct time. Push the crown back in and screw it clockwise to secure it.

. Setting the Date:

. Pull the crown to position 1 (halfway out).

. Rotate the crown clockwise to change the date instantly (recommended to perform this action outside the restricted time period).

2. Winding instructions

- . Automatic winding: Wearing the watch for more than 8 hours a day is sufficient to maintain power.
- . Manual winding (for new or unused watches): Ensure the crown is in its normal position (fully pushed in against the case), then rotate the crown clockwise 30–40 turns until the second hand starts moving.

IV. Unidirectional Rotating Bezel Instructions

1. Function overview: The unidirectional rotating bezel on this watch is designed primarily for assisting with dive timing. It helps divers monitor the duration of their dive, preventing overstay and ensuring underwater safety.
2. Operating method: After putting on the watch, to begin timing, grip the edge of the bezel with your fingers and gently rotate it clockwise. Align the triangle marker on the bezel (at the 12 o'clock position) with the minute hand. As time progresses during the dive,

the minute hand moves while the bezel remains fixed. By reading the scale on the bezel in relation to the position of the minute hand, you can easily determine the elapsed dive time.

V. Water Resistance Instructions

1. This watch is water-resistant up to 300 meters and is suitable for swimming, deep diving, and other underwater activities. However, do not operate the crown, buttons, or any other components while underwater, as this may compromise the watch's water resistance.
2. After exposure to seawater, hot spring water, or chlorinated pool water, promptly rinse the watch with fresh water and wipe it dry with a soft cloth. This helps prevent damage caused by corrosive substances.
3. The water-resistant gaskets will naturally age over time. It is recommended to have the water resistance tested and the gaskets replaced by an authorized service center every 2 to 3 years.

VI. Care and Maintenance

1. It is advised to have the watch's timekeeping accuracy checked once a year. A full maintenance service, including movement cleaning and replacement of aged components, is recommended every 3 to 5 years.

2. Daily cleaning: Regularly wipe the watch surface with a soft damp cloth to remove dust and smudges. For stubborn stains, use a small amount of diluted neutral detergent to gently clean the surface, then rinse with clean water and dry thoroughly.

3. Avoid magnetic fields: Do not place the watch near strong magnetic sources such as televisions, computers, or speakers, as magnetic fields may affect timekeeping accuracy. If the watch becomes magnetized, please take it to an authorized service center for demagnetization.

4. Proper storage: If the watch will not be worn for an extended period, store it in a cool, dry place. It is recommended to use the original watch box to protect it from shocks and pressure.

VII. After-Sales Service

1. Warranty policy: From the date of purchase, this product is covered by a 3-year warranty (the exact warranty period is subject to the proof of purchase). During the warranty period, malfunctions caused by product quality issues are eligible for free repair or replacement of parts.

2. The following cases are not covered under warranty:

Improper use or human-induced damage (e.g., dropping, impact, water ingress).

© Unauthorized repairs or modifications.

○ Normal wear and tear (e.g., scratches on the strap or dial).

3. After-sales service address: LONG VISION Precision Technology Co., Ltd. Zhongchuang Zhiyuan, CITIC Baobihu, Fenggang Town, Dongguan City, Guangdong Province, China

4. Official Website: www.longvisioncn.com. You may visit the website to check product information, view the latest promotions, or consult customer service online.

VIII. Safety Precautions

1. Do not allow children to wear the watch unsupervised, as small parts may pose a choking hazard or improper handling may cause injury.
2. If the watch exhibits abnormal timekeeping, fogging under the crystal, or a loose strap, discontinue use immediately and take it to an authorized service center for inspection and repair.
3. This product is not a medical device and should not be used for medical purposes or life-safety monitoring.

Thank you once again for choosing a LONG VISION watch. May it accompany you through every remarkable moment in life!
